

SignAgent

**Create.
Control.
Collaborate.**

The SignAgent platform is a single source of truth for everyone involved in designing, building, and managing physical sign assets.

SignAgent significantly streamlines workflow for wayfinding designers, fabricators, installers, and end-user facilities, ensuring the effective implementation of wayfinding strategy, which results in an improved experience for visitors and travellers.

Key Applications

- Stadiums & Sporting Events
- Commercial Real Estate
- Municipal, Road Signage
- Park Signage
- Hotels & Theme Parks
- Colleges & Universities
- Transit Systems
- Airports
- Hospitals

Do better work faster.

The SignAgent cloud-based platform puts all your sign information at your fingertips. The position and orientation of each sign is mapped to its location on your location plans or maps, along with messaging, sign type, sign designs, sign hardware, and more.

The SignAgent Mobile App.

Use the SignAgent Mobile App to gather information from the field and immediately add it to your cloud-based sign database in real time.

Design

“I find using SignAgent more efficient than the old ways of printing and hand marking. The platform eliminates mistakes as there is less checking/proofreading and no need to make changes to two different documents. In addition, the mobile app makes creating punch lists and audits much easier.”

Kevin Fromet
Guide Studio

Build

“SignAgent is a robust platform that is absolutely revolutionizing the way signage programs are produced. We especially love how it connects us in real time with the work installers are doing in the field.”

Dan Shamp
Serigraphics

Manage

“SignAgent is a magic wand. It enables us to consistently implement meticulous sign standards at scale across our entire organization.”
